AUGUST 27, 2010

Sportsman Road Intersection

Progress on the Koepfli Lane extension continues. The intersection of Koepfli Lane and Sportsman Road was closed on Monday August 16th for the reconstruction of the intersection. The contractor, Baxmeyer, allotted two weeks for the completion of the intersection. The contractor has finished the intersection, the detours will be lifted, and the intersection will reopen on schedule.

The intersection reconstruction includes the addition of storm sewer and widening and replacing the existing road surface with 8" jointed concrete pavement.

Pavement Management Systems

Every three years Public Works evaluates the condition of all city streets to help determine repair needs and replacement schedules. The inspection process takes roughly one year to complete. Upon completion of the inspection work, the data collected on the condition of each street is compiled with other factors such as pavement age, surface type, type of street, etc. to determine how the City should prioritize repair or replacement work. This program not only helps with identifying problems but also helps with yearly project budgeting.

The City is divided into 12 inspection sectors. Inspections are currently being done in sectors 1 & 2.
